

Review & Giveaway: Carson Optical zOrb

www.beeswhobuzz.com

www.beeswhobuzz.wordpress.com

When I was a kid growing up, I was always fascinated with those bug catchers that had the magnified tops. I remember being so curious as to all the little parts that are invisible to the naked eye. Carson Optical has the most amazing little gadget called the zOrb that kids of all ages will love! What is a [zOrb](#) you ask? Why it's a digital microscope with an integrated camera that displays magnified images of objects directly on your computer screen! The [zOrb](#) comes in three great kid-friendly colors: Safari Green, Lava Orange, and Surf Blue. We had so much fun searching for things to magnify! Some of our favorites included money, our puppy's hair, and bugs! With the 35x Magnification, it was truly amazing to see all the tiny details of the objects.

There's even a built-in internal illuminator that ensures a clear and bright image! The zOrb would make an amazing gift for any young, curious, scientist! Available at www.carsonoptical.com or in our [Bees Who Buzz Amazon Store](#) under the Just For Kids Category!
